

FEATURED COURSE

Level 2 Award Working Safely in Agriculture

Our Delivery Model

Yes, we know it sounds boring, **BUT it is focused on farming**, and it is practical, **delivered by Farmers**. It is not a lecture taken straight off a health and safety poster, it looks at real issues that face us as Farmers, and can help with dealing with inspections, complying with legislation, and professionalising your farm operations. The training is customised to issues real to Welsh Family Livestock Farms, and, because it is a **qualification**, counts as **CPD— Continuing Professional Development**.

CAN BE DONE BY ANYONE OVER 16 - Can be used on a CV— so great for the kids if looking to go to college part time or full time, or looking to work in the industry.

The course is 1 day in length, and at the end you take a multiple choice question paper, which, when passed, gives you the qualification.

The training delivered not only covers the knowledge areas for the test, but also practical record keeping advice specific to Farms. We will ask you to bring a farm map – a couple of A4 copies of saf map would be fine, and we will supply you with a formatted template of how to conduct a safety audit of your own farm. So you will leave with a file and framework of workable procedures that translate easily to your farm.

We are running this **PAN WALES** as face to face training, so there will be opportunities in 2022 to attend **local sessions**.

Sessions covered

- Preparing Health and safety policy and risk assessments for your farm
- Legislation, HSE interventions . Reporting
- Safety and Health- how to manage your procedures and practical interventions.
- Working at height and falling objects
