

Electric Chainsaw Use and Maintenance in a Manufacturing Environment

At a glance...

Assessed Customised Provision

Duration Notes:	2 day
Delivery Method:	Theory and Practical
Recognised by:	Lantra Awards

Introduction

This course was developed for the operation of an electric chainsaw to cut up material in a manufacturing environment within premises.

Overview in brief

This course includes the features, safety checks and appropriate maintenance of the electric chainsaw, PPE, site safety, cutting material accurately and safe handling and stacking of the material.

The finer details

- Safety precautions & appropriate PPE features of the chainsaw
- Component parts of the chain, selecting the chain, sharpening the chain, symptoms of poor cutting performance
- Maintenance of the guide bar, maintenance of the chain brake, sprocket maintenance, re-assembly of the chain, bar & side plate
- Clean power unit & covers & inspect for damage, checking for condition & operational safety
- Actions to take if safety checks indicate incorrect saw

- Identify hazards & comply with control procedures
- Emergency planning & need for effective communication
- Pollution & environmental damage
- Check chainsaw prior to operation, demonstrate safety considerations required during cutting of materials
- Cross cut material to given specification, demonstrate knowledge of risks associated with using long chainsaw bars
- Demonstrate knowledge of the procedure for removing a trapped saw
- Demonstrate knowledge of safe lifting & handling practices.

Who should attend?

What will be covered?

By the end of the course, the learner will be able to:

- Organise site safety & state the precautions required.
- State & Identify PPE required, report on its condition and locate the standard marks
- State & identify the H&S features on the chainsaw
- Identify faults & defects on the chainsaw & decide if this requires service engineer's attention or can be remedied by the operator
- Select correct maintenance tools & report on their condition
- Correctly carry out routine chainsaw maintenance in accordance with Instruction/workbooks
- Chain lubrication
- Carry out pre-cutting tests & state process if chainsaw fails the tests
- State possible hazards/risks during maintenance or operation tasks
- Cross cut material accurately
- Handle & stack material in a safe manner.
